DETAILED ACTION

1. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keller et al. (U.S. 2002/0016433 A1).

Keller et al. teaches the use of nano-meter size particle agglomerates that form a hydrophobic surface when bound by a polymer binder (abstract). The instant invention claims hydrophobic particles held in an extruded member. It would have been obvious to one of ordinary skill in the art that there is no substantial difference between the final form of particles in a binder that has been coated and particles in an extruded layer. The process of extruding the binder is not given much weight as it is unclear how it differs from a coated binder.
